- Ocean Vessel
- Railway
- Truck

## Equipment Inventory

- Trailer-Mounted Boilers
- Skid-Mounted Boilers
- Mobile Boiler Rooms
- Mobile Feedwater Vans
- Mobile Steam Plants
- CataStak™ SCR Systems
- EconoStak Economizers

## Supplying The World With A Reliable Steam Source

Nationwide Boiler supplies dependable steam systems to plants and facilities located around the world. The company's large selection of boilers and auxiliary equipment have been designed and packaged for optimum performance and easy transport, and are readily available to ensure that disruptions in production can be minimized.

Products and services offered by Nationwide Boiler include a complete line of low NOx rental and new/reconditioned firetube and watertube boilers, mobile boiler rooms, EconoStak economizers, CataStak™ Selective Catalytic Reduction (SCR) systems, and feedwater systems. Nationwide Boiler also provides 24 hour comprehensive technical customer support and operator training services tailored to the unique requirements of each boiler system.

Whether by air, land, rail or by sea, you can depend on Nationwide Boiler to deliver the highest quality equipment and the most cost effective solution anywhere in the world.

# A World Renowned Boiler System

## The Babcock & Wilcox Model FM Package Boiler

Boiler operators throughout the world have relied on the Babcock & Wilcox Company (B&W) Model FM Package Boiler for dependable performance and unmatched quality. With over 4,400 units in operation worldwide and a long tradition of supplying boiler systems dating back to 1867, no other company is more synonymous with steam generation than B&W (an ISO 9001 and ASME certified company).

Nationwide Boiler always has in stock the versatile model FM 120-124, which supplies 200,000 lbs/hr of superheated steam and operates up to 650 psig/750°F. The low NOx boiler is set to burn various fuel types (natural gas, plant gas, LPG, or fuel oil #2-#6) and includes all the necessary safety valves, controls, and auxiliaries for reliable and safe operation. Boiler options include heat recovery, feedwater, and emission control equipment. Custom PLC control systems and TUV and SIL certified control systems are also available.

B&W's Model FM D-type boilers are designed with large 2.5" diameter furnace division and D wall tubes with 1" membranes between each tube. This innovative design allows for faster load response and better circulation in the highest heat area of the boiler. A convective type inverted loop superheater is also supplied for more durable and longer lasting operation (compared to radiant types).

Nationwide Boiler, a proud B&W partner and stocking distributor, has supplied innovative products with the highest level of customer service to thousands of customers worldwide. Contact Nationwide Boiler today to learn more about the company's unmatched experience in supplying the world with a reliable steam source.
