

FOR IMMEDIATE RELEASE**NATIONWIDE BOILER ATTAINS LOWEST POSSIBLE
EXPERIENCE MODIFICATION RATE OF 0.61**

Fremont, California, July 7, 2017.....Nationwide Boiler Inc., industrial steam boiler rentals and sales company, has achieved the lowest possible Experience Modification Rate (EMR) of 0.61. A company's EMR is a numeric representation of their safety record, taking into account the number of claims or injuries a company has had in the past year, and the corresponding costs. A low EMR demonstrates a company with a good safety track record and high standards in employee safety and training. The industry benchmark EMR is 1.0.

The company's low EMR has been attained due to a comprehensive safety and training program led by Nationwide Boiler's Health, Safety & Environmental Manager, Holly Lepo. Holly commented, "Our safety mantra is: At the end of the day, we want our employees to go home safe and sound. Nationwide Boiler has a well-rounded Health, Safety & Environmental (HS&E) program that has been fine-tuned by our membership in the ISNetworld and Avetta contractor qualification programs. We currently have over 60 individual safety modules from abrasive wheel grinding to workplace violence. Employee education, involvement, and compliance are the keys to Nationwide Boiler having a successful HS&E program. My management of the program started in 2005 and with program development, implementation, and training, we have achieved an excellent EMR of 0.61. This translates into a significant savings on our workers compensation premiums but it all goes back to...at the end of the day."
